Subject Index

Acoustic emission
during the elastic–plastic deformation of low alloy reactor pressure vessel steels, 251, 267
Adhesives
bonded, stress dependence of creep in, 57
Alloys
Al, fatigue crack growth retardation in, 115
Metglas 2826, the effect of structural relaxation and crystallization on isothermal viscous flow near the glass temperature in, 279
particle-strengthened, the role of the alloy matrix in the creep behaviour of, 165
splat-quenched Al 2024 containing Li additions, the structure and properties of, 213
Aluminium
the dependence of discontinuous deformation on orientation in Al–Mg single crystals, 81
fatigue crack growth retardation in an Al alloy, 115
the structure and properties of splat-quenched Al alloy 2024 containing Li additions, 213
Analysis
discrete dislocation, of a tensile crack under fatigue, 63
thermal gravimeter, of graphite–Br compounds, 129
Antimony
the sintering behaviour of internally oxidized Ag–Sb powder, 139

Bromine
thermal gravimetric, of graphite–Br compounds, 129
pounds, 129

Ceramics
high temperature, for energy applications, basic research needs on, 1
Charpy impact test
transition temperatures in, and fracture toughness in mild steel, the relationship between, 285
Cold working
prior, effect of on the creep of 314 alloy steel, 195
Conservation
energy and raw materials, research and development for, 147
Copper
cyclic strain hardening in polycrystalline Cu deformed at various temperatures, comments and reply, 292, 293
Crack
deformation around a: acoustic emission during the elastic–plastic deformation of low alloy reactor pressure vessel steels, 267
tensile, under fatigue, discrete dislocation analysis of, 63
Crack growth
fatigue, retardation of in an Al alloy, 115
intermediate and high rates of, microstructural effects on fatigue in a low alloy steel at, comments and reply, 291
Cracking
stress corrosion, in engineering materials, some implications of recent developments in plastic fracture mechanics on, 205
Creep
in bonded adhesives, stress dependence of, 57
of particle-strengthened alloys, the role of the alloy matrix in, 165
of 314 alloy steel, effect of prior cold working on, 195
Crystallization
and structural relaxation, the effect of on isothermal viscous flow near the glass temperature in Metglas 2826, 279

Deformation
discontinuous, the dependence of on orientation in Al–Mg single crystals, 81
elastic–plastic, of low alloy reactor pressure vessel steels, acoustic emission during, 251, 267
prior, the effect of on the residual microstructure of explosively deformed stainless steels, 97
Dislocation analysis
discrete, of a tensile crack under fatigue, 63
Dislocations
grain boundary, the effect of the spreading of on the tensile behaviour of a fine-grained austenitic steel at high temperatures, 229

Electron beam melting
and laser melting of M2 tool steel, a comparative study of, 239
Energy applications
basic research needs on high temperature ceramics for, 1
Energy conservation
and raw materials conservation, research and development for, 147
Environment
gaseous, the enhancement of the tensile strength of biaxially oriented polyvinylidene chloride by a, 121

Fatigue
discrete dislocation analysis of a tensile crack under, 63
at intermediate and high crack growth rates in a low alloy steel, microstructural effects on, comments and reply, 291
Fatigue crack growth
retardation of in an Al alloy, 115
Fracture toughness
and Charpy impact transition temperatures in mild steel, the relationship between, 285
Frequency
and mode control and mean value of loading, the influence of on the cyclic stress–strain curve, 73

Grain boundary dislocations
the effect of the spreading of on the tensile behaviour of a fine-grained austenitic steel at high temperatures, 229
Graphite
thermal gravimetric analysis of graphite–Br compounds, 129

Hydrogen
note on the effect of hydrogen on 410 stainless steel, 294

Indentation test
square, for tool materials, 173

Laser melting
and electron beam melting of M2 tool steel, a comparative study of, 239
Lithium
the structure and properties of splat-quenched Al alloy 2024 containing Li additions, 213
Loading
frequency, mode control and mean value of, the influence of on the cyclic stress–strain curve, 73

Magnesium
the dependence of discontinuous deformation on orientation in Al–Mg single crystals, 81
Materials
engineering, some implications of recent developments in plastic fracture mechanics on stress corrosion cracking in, 205
raw, and energy, research and development for the conservation of, 147
tool, a square indentation test for, 173
Mechanics
plastic fracture, some implications on stress corrosion cracking in engineering materials of recent developments in, 205
Melting
electron beam and laser, of M2 tool steel, a comparative study of, 239
Metglas 2826
the effect of structural relaxation and crystallization on isothermal viscous flow near the glass temperature in, 279
Microstructure
effects of on fatigue at intermediate and high crack growth rates in a low alloy steel, comments and reply, 291
residual, of explosively deformed stainless steels, the effect of prior deformation on, 97
Mode control
and mean value and frequency of loading, the influence of on the cyclic stress–strain curve, 73

Orientation
in Al–Mg single crystals, the dependence of discontinuous deformation on, 81

Plastic fracture mechanics
some implications on stress corrosion cracking in engineering materials of recent developments in, 205
Polymers
anisotropic and isotropic yielding criteria for, 89
Polyvinylidene chloride
biaxially oriented, the enhancement of the tensile strength of by a gaseous environment, 121

Reactor pressure vessels
acoustic emission during the elastic–plastic deformation of low alloy steels for, 251, 267
Research
basic, needs of on high temperature ceramics for energy applications, 1
and development for energy and raw materials conservation, 147

Silver
the sintering behaviour of internally oxidized Ag–Sb powder, 139
Sintering
of internally oxidized Ag–Sb powder, 139
Steels
explosively deformed stainless, the effect of prior deformation on the residual microstructure of, 97
fine-grained austenitic, the effect of the spreading of grain boundary dislocations on the tensile behaviour of at high temperatures, 229
410 stainless, note on the effect of hydrogen on, 294
low alloy, microstructural effects on fatigue in at intermediate and high crack growth rates, comments and reply, 291
low alloy reactor pressure vessel, acoustic emission during the elastic–plastic deformation of, 251, 267
mild, the relationship between fracture toughness and Charpy impact transition temperatures in, 285
M2 tool, a comparative study of electron beam and laser melting of, 239
texture inhomogeneity and the strain distribution in shear-spun tubes of, 185
314 alloy, effect of prior cold working on the creep of, 195
Strain
curve of stress *vs.* cyclic, the influence of mode control, mean value and frequency of loading on, 73
distribution of, and texture inhomogeneity in shear-spun steel tubes, 185
Strain hardening
cyclic, in polycrystalline Cu deformed at various temperatures, comments and reply, 292, 293
Stress
dependence on of creep in bonded adhesives, 57
vs. strain, cyclic, curve of, the influence of mode control, mean value and frequency of loading on, 73
Stress corrosion cracking
in engineering materials, some implications of recent developments in plastic fracture mechanics on, 205
Structural relaxation
and crystallization, the effect of on isothermal viscous flow near the glass temperature in Metglas 2826, 279

Structure
and properties of splat-quenched Al alloy 2024 containing Li additions, 213

Temperature
Charpy impact transition, and fracture toughness in mild steel, the relationship between, 285
glass, in Metglas 2826, the effect of structural relaxation and crystallization on isothermal viscous flow near the, 279
high, basic research needs on ceramics for use at, for energy applications, 1
high, the effect of the spreading of grain boundary dislocations on the tensile behaviour of a fine-grained austenitic steel at, 229
Tensile behaviour
of a fine-grained austenitic steel at high temperatures, the effect of the spreading of grain boundary dislocations on, 229
Tensile crack
under fatigue, discrete dislocation analysis of, 63
Tensile strength
of biaxially oriented polyvinylidene chloride, the enhancement of by a gaseous environment, 121
Tension
uniaxial: acoustic emission during the elastic–plastic deformation of low alloy reactor pressure vessel steels, 251
Test
square indentation, for tool materials, 173
Texture
inhomogeneity of, and the strain distribution in shear-spun steel tubes, 185
Thermal gravimetric analysis
of graphite–Br compounds, 129
Tools
a square indentation test for materials for, 173
Toughness
fracture, and Charpy impact transition temperatures in mild steel, the relationship between, 285
Transition temperatures
Charpy impact, and fracture toughness in mild steel, the relationship between, 285

Viscous flow
isothermal, near the glass temperature in Metglas 2826, the effect of structural relaxation and crystallization on, 279

Yield
anisotropic and isotropic yielding criteria for polymers, 89
